Although I have answered affirmatively to question number 1, I also agree with the second option this question	1
My institution is not going to adopt RDA, at the moment	1
My parent institution is not a library or education institution and will not make funding available for the change of standard	1
RDA is insufficient at present. However, work is being done on this by the RBMS in the US and if that proves a succes we will consider using RDA	1
So much of the cataloguing project was already done without RDA	1
We are waiting for the RBMS policy statements to be finalised.	1

Am a rare materials creator, and am interested in collaborating with libraries	1
Ours is not a question of lack of will or desire to adopt RDA, it is one of labor and resources	1
We already use RDA for more modern materials. We continue to use DCRM for older titles. The outcome of the RBMS efforts to incorporate RDA into DCRM will determine how we go forward.	1
We use a hybrid approach, predominantly DCRM or AMREMM with fields added to accommodate RDA	1
