500   RELATED ACCESS POINT – PERSONAL NAME

[…]

$o   International Standard Name Identifier (ISNI)

The subfield $o (International Standard Name Identifier) is used in field 500 to record the ISNI of the related identity. When the preferred access point of an authority record that contains field 010 is transferred to the 500/510/520 access point of another record (while establishing a link between both authority records), the number contained in the 010 field of the first record will also be transferred in a devoted subfield $o. Repeatable.
